

Student ID	Student Name	Marks
S001	Amit	12
S002	Priya	18
S003	Rahul	25
S004	Neha	27
S005	Karan	33
S006	Sneha	38
S007	Riya	41
S008	Arjun	45
S009	Pooja	48
S010	Vivek	52
S011	Rohit	55
S012	Simran	58
S013	Mohit	61
S014	Anjali	65
S015	Nikhil	68
S016	Aditi	71
S017	Varun	74
S018	Meera	77
S019	Saurav	82
S020	Kavya	86
S021	Deepak	89
S022	Ishita	91
S023	Akash	94
S024	Tanya	97
S025	Harsh	100

Marks Range	Frequency	% of std
0-20	2	8%
21-40	4	16%
41-60	6	24%
61-80	6	24%
81-100	7	28%

Why was a Clustered Column Chart used instead of Excel's Histogram?

Excel's built-in Histogram automatically creates bins based on the minimum value in the dataset. In this dataset, the minimum mark is 12, so Excel generated bins like 12–32, 32–52, 52–72, etc. However, the question specifically requires the bins 0–20, 21–40, 41–60, 61–80, and 81–100.

Since Excel's Histogram does not allow complete control over custom bin ranges, a Clustered Column Chart was created using a manually calculated frequency table (using the COUNTIFS or FREQUENCY function). The Gap Width was then reduced to 0% so that the bars touch each other, making it visually similar to a histogram.

This approach accurately represents the required custom intervals and is commonly used in business reports and data analysis when predefined class intervals are required.

Which score range contains the highest number of students?

Most students scored between 81 and 100, indicating that the overall performance of the class is high, with a large concentration of students achieving excellent marks.

Final Answer: 81–100 (Frequency = 7)

Which score range contains the lowest number of students?

Score Range: 0–20
Frequency: 2 students

Only 2 out of 25 students scored in the 0–20 range. This indicates that very few students performed poorly, suggesting the overall class performance is relatively good.

Are the marks evenly distributed?

Answer: No.
The distribution is not perfectly even. The number of students generally increases as the score range increases. More students scored in the higher ranges than in the lower ranges.

Which score range has the highest concentration?

Answer: 81–100
Frequency = 7 students
This is the highest among all score ranges.

Would you say students generally scored Low, Medium, or High?

Answer: High
Reason:
13 out of 25 students (52%) scored above 60.
The highest frequency is in the 81–100 range.
Very few students (only 2) scored between 0–20.
