Problem 4 — Hidden Rows vs Filtered Rows

Hide rows 5–8 manually (do NOT filter).

Now calculate

1. SUM of Sales

2. SUBTOTAL(9,...)

3. SUBTOTAL(109,...)

Questions

1. Which function ignores manually hidden rows?

2. Which includes them?

3. Why are the totals different?

816550	
816550	Reason: Function code 9 ignores filtered rows but includes manually hidden rows.
593550	Calculation: 816,550 – 268,000 = 548,550
SUBTOTAL(109, ...)	
SUM(), SUBTOTAL(9, ...)
